

ATSDR/EPA Points of Agreement  
from 6/26/01 VB/I-70 Working Group Technical Meeting

1. Coefficient of variation to estimate  $EPC_{acute}$ 
  - ATSDR likes
  - Comment possible during public comment period
2. Soil Pica Scenario
  - ATSDR will clarify in writing what the recommended toxicity value is
  - ATSDR is close to agreeing with Case #2 in HHRA
  - EPA recommends discussion of uncertainty in PHA

Remaining issues:

  - ▶ RfD
  - ▶ RBA
3. Garden vegetables are not a significant health risk
4. Exposure duration of 30 years is standard EPA default; EPA will discuss 39 year exposure duration in sensitivity analysis.

Remaining issues:

- Bioavailability. ATSDR accepts pig studies generally, but not site specific interpretation of data.
- Indoor Dust. ATSDR prefers to use soil data, not dust data. Uncertainty will be addressed in HHRA.
